# Spring, JavaConfig (@Configuration), and TransactionManager

Posted on [October 25, 2015](#) by [Arulkumaran Kumaraswamipillai](#)

This extends configuring [JDBC](#) and [JPA](#) to configure the TransactionManager.

## Example #1 Wiring JDBC Transaction Manager

**Note:** `@EnableTransactionManagement` annotation

```

1
2 @Configuration
3 @ImportResource("application.yml")
4 @EnableTransactionManagement
5 public class AppConfig
6
7     @Bean
8     public DriverManagerDataSource datasource()
9         DriverManagerDataSource ds = new DriverM
10         ds.setDriverClassName(environment.getReq
11         ds.setUrl(environment.getRequiredPropert
12         ds.setUsername(environment.getRequiredPr
13         ds.setPassword(environment.getRequiredPr

```

```

14         return ds;
15     }
16
17     @Bean
18     public JdbcTemplate jdbcTemplate() {
19         return new JdbcTemplate(datasource());
20     }
21
22     @Bean
23     public DataSourceTransactionManager transactionManager() {
24         final DataSourceTransactionManager trans
25         return transactionManager;
26     }
27 }
28

```

If you want to create a mock transaction manager, then you can do

```

1
2 package sample;
3
4 import org.springframework.stereotype.Service;
5 import org.springframework.transaction.PlatformTransactionManager;
6 import org.springframework.transaction.TransactionDefinition;
7 import org.springframework.transaction.TransactionManager;
8 import org.springframework.transaction.TransactionManager;
9
10 public class MockedTransactionManager implements TransactionManager {
11
12     @Override
13     public TransactionStatus getTransaction(TransactionDefinition definition) {
14         return null;
15     }
16
17     @Override
18     public void commit(TransactionStatus status) {
19     }
20
21     @Override
22     public void rollback(TransactionStatus status) {
23     }
24 }
25

```

Also, the unit test classes need to extend the "AbstractTransactionalJUnit4SpringContextTests"

```

1
2 //....
3
4 @RunWith(SpringJUnit4ClassRunner.class)
5 @SpringApplicationConfiguration(classes = { AppC
6 public class EventMergeProcessorImplIntegrationT
7
8     //.....
9
10 }

```

## Example #2 Wiring JPA Transaction Manager

```

1
2 @Configuration
3 @ImportResource("application.yml")
4 public class AppConfig
5
6     //.....
7
8     @Bean
9     public PlatformTransactionManager transactionManager() {
10         final PlatformTransactionManager transactionManager =
11             new DataSourcePlatformTransactionManager(dataSource());
12         final JpaTransactionManager jpaTransactionManager =
13             new JpaTransactionManager(entityManagerFactory());
14         jpaTransactionManager.setEntityManagerFactory(entityManagerFactory());
15         transactionManager = jpaTransactionManager;
16         return transactionManager;
17     }
18 }
19

```
